

Startup Detector

Detect new Startup Shortcuts (like our autocalc from before)

Instructions

1. Go back to the autocalc exercise from the previous topic. Remember how it works
2. Develop a script `startup_detector.py` that uses filesystem monitoring to detect new startup programs
3. In order to parse .lnk files from python, you can use `pylnk3`:

```
> pip install pylnk3
> python
>> import pylnk3
>> link = pylnk3.parse(lnk_path)
>> link.path
>> link.arguments
```

Example output

```
> python startup_detector.py
* Monitoring new startup programs...
* Startup program detected!
C:\Windows\System32\calc.exe
```

To submit

Submit script `startup_detector.py`.
